

Custom injection molding specializing in recycled plastics

AGS Technology was born from the desire to do it differently, more sustainably, and at a lower cost. The business of injection molding had become mature, with few innovations. The biggest opportunity to make a truly impactful change came by addressing the material used. The introduction of direct injection molding of recycled material in a virgin dominant market was a paradigm shift for the plastics industry.

Certified Re grind: Cleaned, blended, and tested to customer's specifications.

Injection Molding: Specially designed molding technology that allows for precise shot-to-shot repeatability.

Green solutions for your business and the environment

Our technology paired with exceptional planning and process control ensures greater efficiencies, product performance and reliability.

THE TOP 10 AGS DIFFERENCES

1. Proven Performance Since 1995
2. Cost Competitive
3. Recycled Content
4. IATF 16949:2016 Registered
5. Certified Minority Business
6. Raw Material Expertise
7. Demanding Markets and Applications
8. Full-Service Capabilities
9. Advanced Technologies
10. In-House Testing Lab
